PRESENTATION HANDOUT – WWW.WINDYJMUSIC.COM

WHAT AN ANDROID PHONE LOOKS LIKE

WHAT AN ANDROID TABLET LOOKS LIKE

APP	CATEGORY	CLASSROOM USE
AquaMail	Email (Push Support) Widget	Works for Email accounts provided by your Internet Service Provider. Free for 2 accounts, need Pro for more than 2 accounts
TouchDown	Microsoft Exchange (Push Support) Widgets	Best with Pro but costs some money, syncs to all aspects of your Exchange account, including email, calendar, tasks and more. Careful to get the Phone version for your Phone, or the Tablet version for your Tablet.
Dolphin Browser	Internet Browser	Most versatile browser for Androids. You can also download add-ons that allow for quick syncing to your Evernote, or saving a webpage as a PDF, among other options. Recommended for Androids with Honeycomb or older
Google Chrome	Cross-Platform Internet Browser	Only available on Ice Cream Sandwich or higher. Syncs with your Google Chrome browser on any device you have it on, including your computer.
MightyText	Cross-Platform Texting	Text from your computer or tablet. Download the app onto your Phone, and every text or phone call you get will send a notification to your computer with Google Chrome and your tablet. You can also text from your computer and your tablet as well.
Business Calendar	Cross-Platform Calendar Widgets	Syncs all your calendars from multiple sources. You can add, delete or change events on any calendar you have syncing to it. If you update your Google Calendar on the computer, it automatically updates it to your phone. Great way to synchronize your family members' calendars.
Astrid	Cross-Platform To-Do Tasklist Widgets	Can be kept up-to-date on your computer, Android or iPhone. Share your To-Do list with students or family members. Turn yourself into a Type A personality. Widgets aren't all that great.
Android Agenda Widget	Widget for Calendars and To-Do Tasklists	A simple agenda-style widget that lists all your upcoming events and tasks (and their due dates) right on your homescreen.
Dropbox	Backup Data Data Synchronization	Install Dropbox on your computer. It creates a Dropbox folder in your Documents folder. Anything you save into that Dropbox folder is automatically backed up to "The Cloud". Install Dropbox on another computer or Android, and anything that is updated on "The Cloud" is automatically updated on each and every computer or Android you've installed it on. A backup for your backup for your backup.
Adobe PDF	Document Reader	Easily add comments or signatures to PDF files.
Repligo Reader	Document Reader	A faster version of Adobe PDF, but costs for the best features in the Pro version.
Kingsoft Office	Microsoft Office Document Reader	So far as I have found, this is the best Android App for reading PowerPoint, Word or Excel files. Interface is also the most similar to the Microsoft interface.
Cloud Print	Printer App	Even if your Android is not connected to the computer, it will still print any file you have open on your Android to a printer connected to a computer that has Google Chrome.
CamScanner	PDF Maker	Save any image you capture on your camera as a PDF. Very handy for saving notes you write on the Whiteboard.
Evernote	Notebook Cross-Platform Widgets	Keep track of all your notes, either for yourself or for school. Share your notebook with your students, so they never lose their notes. Invite parents to join the notebook as well. Also works on computers, Apple devices and Blackberry
Skitch	Drawing Pad for Evernote	Sometimes you need to draw pictures for your notes, or add your own thoughts to a picture you already took or downloaded. Skitch will do this for you, and sync to your Evernote.
Unified Remote	Remote Control for Computer	A simple remote control for your computer. Interface is extremely simple, and therefore interacts very fast. Needs to be connected on the same WiFi as your computer WiFi or Bluetooth.
TeamViewer	Remote Control and Screen Sharing for Computer	TeamViewer will project your computer's screen right onto your Android device. You can also operate your computer from TeamViewer. TeamViewer also has an app for sharing your screen to many other users. Works so long as both devices are connected to the Internet, and great for if you don't have a SmartBoard.
Facebook Pages	Social Media Communication	Make your own Facebook Page as a "Homework Site" for your students. They are already on Facebook, why not help them learn using it as well?
Plume	Social Media Widgets	Mainly for Twitter, but also helps you manage your Facebook account and Pages. Twitter is useful as a Professional Development medium.
LinkedIn	Business Social Media	Filled with groups that are involved in great Professional Development discussions. Also helps you find great contacts for Professional Interaction.
Weebly for Education	Teacher Homework Sites	Weebly is intuitive and easy to use. Makes homework site development uniquely yours, and also automatically creates your own mobile version of your homework site.
